With the CPW Process a process step of a business process is represented as a simple sentence with Subject, Predicate and Object. An example for a process step according to the CPW Process would be: Peter and Mary make coffee with milk. Then the simple sentence consists of the subject: "Peter and Mary", and the predicate: "make" and the object: "coffee with milk". The process step represented as a simple sentence is represented graphically as CPW Process at this example as follows:

**Fig. 1: CPW Process with Subject, Predicate and Object**

In the simple and trivial example there is represented at the CPW Process only one process step with subject, predicate and object. With the CPW Process several process steps can also be linked together, or it can happen after a process step to a logical operation or it can occur after a process step to an iteration, so that the CPW Process can be represented as a sequence, a logical operation and an iteration with the particular process steps. In the following figure is for this purpose an appropriate example for a CPW Process:

**Fig. 2: CPW Process with Subject, Predicate and Object**
